Aruba Barmawar

AI/ML & FULL-STACK DEVELOPER

Bhatkal, Karnataka, India • barmawararuba@gmail.com • linkedin.com/in/barmawararuba • github.com/barmawararuba-lab

PROFESSIONAL SUMMARY

Computer Science and Engineering (Data Science) undergraduate student with a strong foundation in machine learning workflows, modern full-stack web architectures, and analytical problem-solving. Hands-on experience developing practical applications including predictive modeling systems, geospatial issue trackers, and relational web platforms. Demonstrated collaboration through national hackathon qualification and structured industry internship programs. Seeking software engineering and data science internship opportunities to apply technical skills to impactful, real-world solutions.

EDUCATION

BHATKAL, KARNATAKA

Bachelor of Engineering (B.E.) — Computer Science & Engineering (Data Science) 2025 — 2029

Anjuman Institute of Technology and Management (AITM), Bhatkal (Current: Second Year, 2026–2027)

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming (Python, C), Database Management Systems, Machine Learning Foundations, Statistics & Linear Algebra.

EXPERIENCE

Data Science Intern — 1Stop in association with IIT Kharagpur Jun 2026 — Jul 2026

- Completed a structured Data Science internship program covering statistical modeling, exploratory data analysis (EDA), and machine learning pipelines under industry-academic collaboration.
- Engineered Natural Language Processing (NLP) text classification models for hate speech detection using Python, Pandas, and Scikit-Learn.
- Built and evaluated supervised machine learning models for heart failure patient mortality prediction and performed feature analysis on credit datasets.

Technical Team Member — Team AXIOM — Smart India Hackathon (SIH) 2026

- Selected for the National Round of Smart India Hackathon addressing Problem Statement SIH26189 among nationwide engineering teams.
- Co-developed NEXUS-CRIME, an AI-powered criminal network analysis system prototype utilizing knowledge graphs and relationship mapping to connect fragmented intelligence records.
- Assisted in designing interactive relationship cluster visualizations and integrating machine learning analysis into an investigative dashboard.

PROJECTS

Rental Tracker Next.js • TypeScript • PostgreSQL • Prisma ORM • Tailwind CSS 2025 — 2026 | Live Web App

- Engineered and deployed a centralized property rental management web platform streamlining unit administration, tenant records, and payment tracking.
- Constructed a normalized PostgreSQL relational database schema with Prisma ORM enforcing transactional integrity across properties, units, leases, and ledger transactions.
- Implemented dynamic unit vacancy filtering, Cloudinary-backed document storage, and visual occupancy analytics dashboards using Recharts.

NEXUS-CRIME (AXIOM) — AI-Powered Criminal Network Analysis 2026 | In Progress

Python • AI/ML • Knowledge Graphs • React • Node.js

- Developing an investigative intelligence system that links heterogeneous data across suspect profiles, incident logs, and vehicle registries using knowledge graphs.
- Implemented interactive entity relationship cluster maps and degree-of-separation filters; ongoing development focuses on expanding multimodal evidence analysis pipelines.

FixIt Campus — Campus Infrastructure Issue Resolution React • Node.js • Express • MongoDB • Leaflet • Tailwind CSS 2025 | Prototype

- Constructed an issue management prototype following an end-to-end *Report → Track → Resolve* lifecycle for campus facilities.
- Integrated Leaflet geospatial mapping to visualize reported issue coordinates and built administrative ticket assignment and status update workflows.

AI Resume Screening & Candidate Ranking System 2025 | Working Project · Not Deployed

Python • Machine Learning • NLP • Scikit-Learn • React

- Engineered a recruitment evaluation pipeline that extracts structured text from candidate resumes and predicts matching job categories using NLP classification algorithms.
- Built an objective candidate ranking dashboard in React allowing hiring teams to inspect qualification matches and compare applicant profiles.

TECHNICAL SKILLS

Programming Languages:	Python, JavaScript (ES6+), C, SQL, HTML5, CSS3
Web Development:	React (v18/19), Next.js, Node.js, Express.js, RESTful APIs, Tailwind CSS
Frameworks & Libraries:	Scikit-Learn, Pandas, NumPy, Prisma ORM, Recharts, Leaflet
Databases:	PostgreSQL, MongoDB
Tools & Platforms:	Git, GitHub, Vite, Postman, Vercel, VS Code, Linux / Terminal
AI/ML Technologies:	Machine Learning Foundations, Natural Language Processing (NLP), Exploratory Data Analysis (EDA), Text Classification, Predictive Modeling
